PROFESSIONAL SUMMARY

Results-driven **AI Engineer** specialising in **production Generative AI, Agentic LLM systems, and financial automations** on Microsoft Azure. B.Tech, **NIT Delhi** (ECE, 2024). At **Alpago Group**, working directly under the CEO, architected comprehensive **agentic AI financial reporting systems**, FinanceGPT (a conversational advising bot), and a robust Corporate Finance Module for contract payments and cash flow analysis. Expert in bridging complex transactional database architectures with advanced AI using **Python, LangChain, Azure OpenAI, RAG, MLOps, and SQL Server**. Pursuing **MBA in AI for Business**, BITS Pilani Dubai (2026–2028).

WORK EXPERIENCE

Alpago Group

AI Engineer — Full-Time

Dubai, UAE

Sept 2025 – Present

Directed and engineered an **Agentic AI Financial Intelligence Platform** under the direct sponsorship of the CEO, automating end-to-end financial reporting, statement parsing, and dynamic cash flow analysis.

Built **FinanceGPT** — an autonomous LLM advising bot (RAG + LangChain + Azure OpenAI) that parses raw bank statements to forecast cash flows, flag budget overruns, and provide real-time strategic financial advice to executive management.

Developed a **Corporate Finance Module** integrating a contract payments management system and check monitoring engines; built automated workflows to generate and distribute consolidated financial reports to management every month-end.

Designed and optimized **transactional database architectures** with advanced triggers and debugging routines, utilizing Python, SQL Server, and .NET C# to ensure flawless ledger entries and trial balance reporting.

Implemented full **MLOps pipelines** — MLflow experiment tracking, Docker containerisation, Kubernetes orchestration, CI/CD — for scalable, reproducible AI model delivery across financial systems.

Constructed interactive financial dashboards in **Power BI** connected to hybrid ML models, translating raw transaction data into actionable corporate intelligence.

Neostats Analytics Solutions LLC

Client Success Manager

Dubai, UAE

Oct 2024 – Aug 2025

Aligned **GenAI solution roadmaps** with C-level objectives; authored technical proposals converting AI use-cases into measurable ROI across GCC clients.

Led end-to-end AI project delivery — scoping, resourcing, stakeholder management, and on-time execution.

Generated qualified pipeline through custom AI demos; managed full-cycle sales forecasting and tracking.

Maintained **2,000+ professional connections**; represented company at regional industry events.

KEY AI & FINANCE PROJECTS

Agentic AI Financial Advisor & Reporting Automation (FinanceGPT)

Alpago · 2025–2026

Developed directly for the CEO, an autonomous **Agentic AI bot** built on **LangChain + Azure OpenAI (GPT-4o)** with a RAG layer over the company's financial transaction history.

Engineered an automated pipeline for **statement parsing to cash flow analysis**, utilizing Azure Document Intelligence to convert unstructured PDFs into structured, real-time liquidity insights and financial advice.

Deployed a persistent multi-turn conversational interface with **function-calling (tool-use)** capabilities, allowing management to query live trial balances, future cash-flow forecasts (ARIMA + LLM synthesis), and anomaly alerts.

Stack: [Azure OpenAI](#), [LangChain](#), [Azure Document Intelligence](#), [Python](#), [FastAPI](#), [ARIMA](#), [Power BI](#)

Corporate Finance & Contract Payments Management Module

Alpago · 2026

Architected a centralized **Corporate Finance Module** to govern enterprise-wide expenditures, featuring a robust **contract payments management system** and integrated check monitoring engines.

Automated the generation and distribution of comprehensive **month-end management reports**, eliminating manual reconciliation efforts and accelerating executive decision-making.

Refactored and optimized **transactional database architectures** utilizing advanced triggers and C# data models to secure accurate ledger tracking and waterfall allocation services.

Stack: [.NET C#](#), [SQL Server](#), [Python](#), [React](#), [JavaScript](#), [Automated Workflows](#), [Power BI](#)

AI Meeting Intelligence & Task Automation System

Alpago · 2025

Integrates with **Fireflies.ai** to ingest meeting recordings; an **NLP + LLM pipeline** auto-extracts structured tasks, key decisions, owners, and deadlines from transcripts.

Extended with custom **CEO-level workflow automation**: strategic trip planning, initiative tracking, calendar-aware task scheduling, and priority-ranked smart reminders.

Delivers a live **prioritised action board** with Slack and email push notifications; maps follow-ups to assignees and calendar events automatically.

Stack: *Fireflies API, Azure OpenAI, LangChain, n8n, Python, REST APIs, Notion/Jira Integration*

Conversational AI Text-to-Speech (TTS) Synthesis

End-to-end NLP + Deep Learning pipeline using **Tacotron 2** for high-fidelity speech synthesis and **LLaMA** for context-aware text generation from SQL-stored content.

Deployed via **Flask REST API** with inference acceleration and model optimisation for low-latency production use.

Stack: *PyTorch, TensorFlow, LLaMA, Tacotron 2, MySQL, Flask*

AI-Driven Construction Safety Compliance on Azure

2024

Generative AI system on Microsoft Azure for **real-time safety and regulatory compliance monitoring** on construction sites, combining computer vision (object detection) with IoT sensor data fusion.

Automated incident flagging and compliance reporting, reducing manual safety audits significantly.

Stack: *Azure ML, Cognitive Services, IoT Hub, TensorFlow, PyTorch, Python*

TECHNICAL SKILLS

AI / LLMs / GenAI	GPT-4o, LLaMA, BERT, LangChain, RAG, Prompt Engineering, Fine-Tuning, Agentic AI, Azure OpenAI, Hugging Face Transformers
ML & Deep Learning	scikit-learn, PyTorch, TensorFlow, LSTM, Transformers, Hybrid ML, Behavioural Modelling, Anomaly Detection, Forecasting (ARIMA)
Software & Architecture	.NET C#, React, JavaScript, FastAPI, Flask, REST APIs, Transactional Database Architectures, Check Monitoring Engines
Data Engineering	Python, SQL Server, MySQL, ETL Pipelines, Feature Engineering, n8n, Azure Document Intelligence, Database Triggers
Cloud, BI & MLOps	Microsoft Azure, Azure Cognitive Services, Power BI, DAX, MLflow, Docker, Kubernetes, CI/CD Pipelines

EDUCATION

BITS Pilani — Dubai Campus

MBA in AI for Business

Dubai, UAE
2026 – 2028 (In Progress)

National Institute of Technology (NIT), Delhi

B.Tech in Electronics & Communication Engineering

Delhi, India
2020 – 2024

CERTIFICATIONS

Microsoft — Fabric Analytics Engineer	NVIDIA — Prompt Engineering with LLaMA-2
Microsoft — Security Operations Analyst (SC-200)	NVIDIA — Deploying RAG Pipelines for Production at Scale
